

## **Increasing of postharvest life time of Beans (*Phaseolous vulgaris L*) by hydro cooling**

*Champa W.A.H., Dissanayake,T.M.R., Thilakerathne,B.M.K.S. (2010) Effect of removal of field heat by hydro cooling on prolonging shelf life of beans. Proceedings of international symposium, University of Ruhuna*

*Institute of Post Harvest Technology, Research And Development Centre, Jayatnathi Mawatha, Anuradhapura.*

This research was conducted for determination of capability of Increasing of post harvest life time of Beans (*Phaseolous vulgaris L*) by removing the temperature of beans by hydro cooling. Proper harvested beans of the variety Kentucky Wonder Green was used for the experiments. Hydro cooling was done at temperatures 8°C, 12 °C and room temperature.

- 01 Bean pods were immersed in water at room temperature (25°C) 15 minutes and water drained out and stored in room temperature in plastic bags can increase the life time by 8 to10 days.
- 02 In order to store under refrigerate conditions at (7.5 °C and RH 85% to 95%)beans should be immersed in water (8 °C to12 °C) up to 5 minutes quality can be enhanced and life time can be increased up to 10 days.
